

Don't Take Our Word For It

Organizations Leverage the Kaseya IT Automation Framework to Increase PC and Server Uptime

Optimal systems availability is the hallmark of a successful IT systems management strategy. Users need access to the tools and information they need on a daily basis, meaning that your ability to maintain the availability of PCs and servers is critical in enabling the organization to meet its business goals.

The integrated Kaseya IT Automation Framework enables visibility into and control over distributed systems, ensuring that your organization's systems are always up to date and running optimally. IT policies are managed from a central console where systems performance and availability are measured against pre-determined thresholds with built-in alarms to alert technicians if there is a problem. Kaseya gives administrators the visibility to predict and head off potential issues and the control to quickly remediate problems that do occur. Pertinent information such as hardware configuration, licensing and usage data is automatically integrated in Kaseya's single-pane dashboard, giving help desk technicians the management information they need at their fingertips.

Thousands of organizations have leveraged Kaseya to proactively head off potential problems before downtime occurs and improve time to resolution when issues do occur. Isn't it time you better empowered your users?

"Kaseya has improved the availability of our clinic management information system from 85-90 percent available to 99.6 percent available, making the senior management team comfortable with relying exclusively on an electronic patient tracking system."

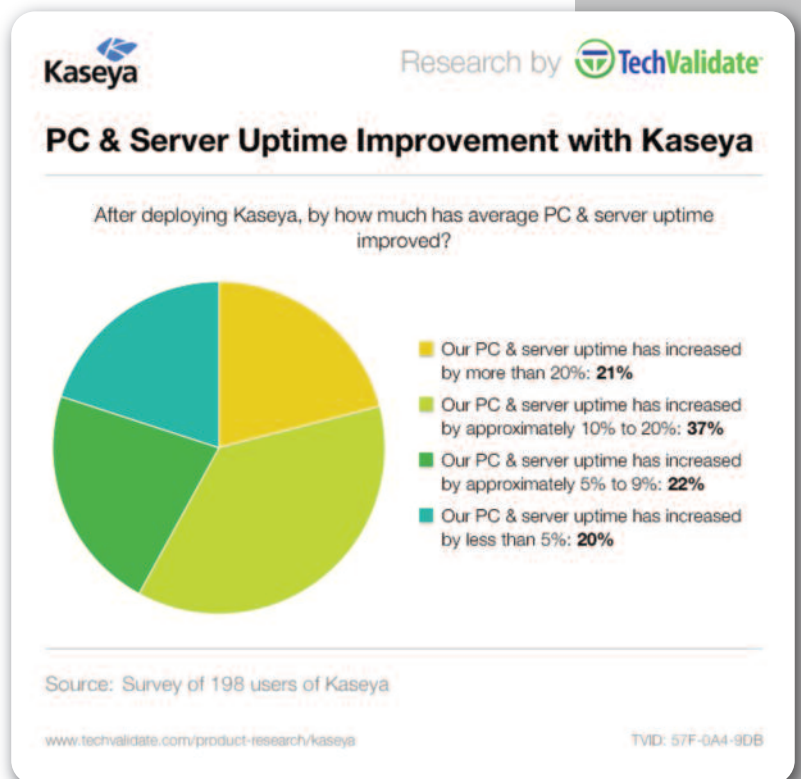

- Scott Walters,
IT operations manager, Family Health Centers of San Diego

"Things are less likely to go wrong with Kaseya manning the watch. We went from 85 percent availability to 99 percent availability. Downtime is virtually non-existent, allowing teachers to do what they are meant to do—teach."

- Brad Huffaker,
technology director, North Conejos School District

"Kaseya shifted our focus from reactive management to proactive management. Now we can potentially head off problems with our DVD kiosks before they occur, ensuring continuous availability. We're now able to maintain 99.5 percent availability for our kiosks, ensuring customers have access to the movies they want to rent when they want to rent them."

- Eric Hoersten,
vice president of information technology, Redbox

About Kaseya

Kaseya is the leading global provider of IT Systems Management software. Kaseya solutions empower virtually everyone — from individual consumers to large corporations and IT service providers — to proactively monitor, manage and control IT assets remotely, easily and efficiently from one integrated Web-based platform.
